CedarPeak Solutions

Synthetic Supplier Proposal | Commercial clarity and compliance documentation; moderate technical depth

Proposal at a glance

Field	Response
Supplier	CedarPeak Solutions
Proposal date	2026-10-05
Commercial estimate	INR 31,00,000 implementation + INR 4,00,000 annual support
Profile	Commercial clarity and compliance documentation; moderate technical depth

1. Executive Summary

CedarPeak provides clear assumptions, a defined schedule, and useful security process documentation. The technical architecture is conventional; scale and integration details need discovery.

2. Understanding of Requirements

The buyer requires technical fit, a credible implementation plan, transparent commercial terms, security/compliance controls, and a support model. This synthetic response addresses those themes and is intended only to test document extraction and evidence-grounded scoring.

3. Proposed Solution & Technical Capability

Three-tier web architecture, REST APIs, relational storage, RBAC, separate development/test/production environments, source control, code review, and release approvals. Three integrations included with discovery checklist; no throughput figures or performance testing evidence. A fourth integration requires priced change request.

4. Implementation Plan & Team

16 weeks: discovery 2, design 3, build 5, integration 2, testing 2, training/launch 2. Deliverables: requirements matrix, weekly report, test scripts, handover guide. Team: PM, solution analyst, two developers, shared QA. Risk log exists, but mitigation for delayed API access is brief.

5. Commercial Proposal

One-time INR 31,00,000; annual support INR 4,00,000; first year INR 35,00,000 before taxes. Includes three integrations, two training workshops, 45-day warranty. Hosting, licenses, and migration beyond agreed sample excluded. Payment: 20% kickoff, 20% design, 30% build, 20% UAT, 10% acceptance. Exclusions and tax treatment are clear.

6. Security, Compliance & Risk Controls

RBAC, SSO option, TLS, encryption at rest, audit logging, quarterly access reviews, annual vulnerability assessment, incident notification process, retention/deletion steps. Security policy summary and recent penetration-test executive summary attached, but no recognized management-system certificate. Daily backup; proposed RPO 12 hours/RTO 24 hours.

7. Support Model

Business-hours service desk; P1 response 2 hours, P2 6 business hours; escalation via delivery manager; monthly ticket summaries and 45-day warranty. One comparable deployment has scope and outcome metrics; second reference available on request.

8. Relevant Experience & References

One comparable deployment with scope/outcomes; a second reference available on request. Smaller reference portfolio than Orbit.

9. Key Risks, Assumptions & Gaps

Only three integrations; no quantified performance targets; RTO may be too long; shared QA capacity.

10. Strengths and Limitations

Strengths: Clear pricing, useful security evidence, transparent exclusions. Limitations: Moderate technical capacity detail and 24-hour proposed RTO.

Declaration and evidence note

This proposal is fictional. All prices, dates, project histories, references, metrics, and claims are synthesized for software testing, not a real commercial offer. Production evaluators must verify quotations against the source PDF and flag unsupported claims for human review.
